

RMA IV Pole / Dripstand Model 5418

For decades, the humble IV pole has been an essential but often overlooked item in healthcare settings. However, we have developed this simple yet necessary piece of equipment to a new level based on feedback from healthcare professionals. Through innovative design and superior materials, we've produced an IV pole that eliminates the common problem areas associated with traditional IV poles/Dripstands, setting a new industry standard.

One of the key features of our IV pole is its construction using 304 Stainless Steel. A durable and easy-to-clean material known for its corrosion resistance. Unlike traditional IV poles with painted mild steel areas that are prone to chipping, scratching, and rusting, the RMA IV pole is built to last.

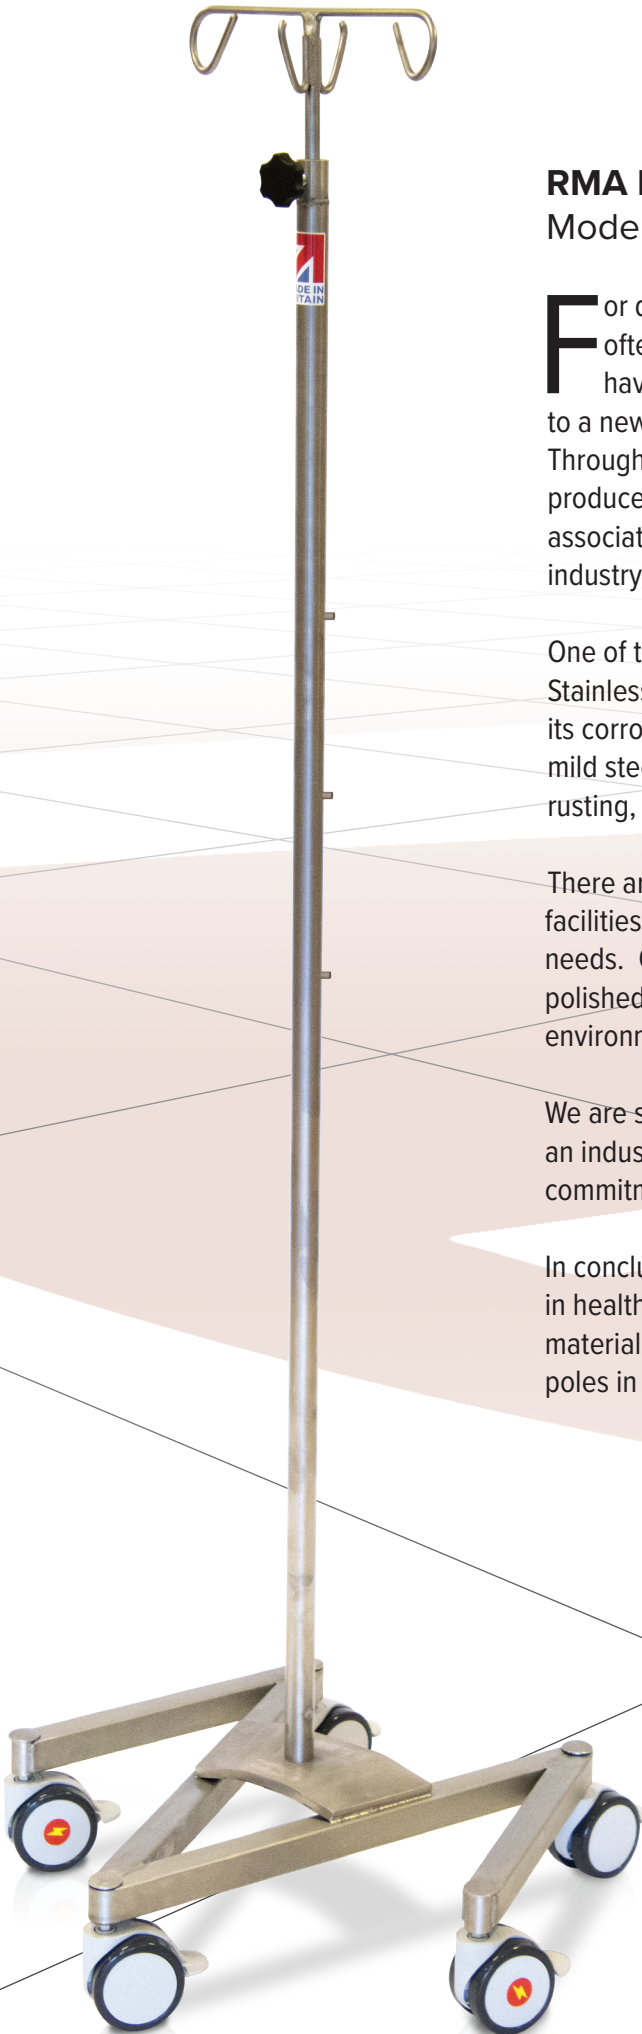

There are various hook configurations available. Healthcare facilities can choose the IV pole that best meets their specific needs. Our IV poles are also available with a passivated electro-polished surface that inhibits bacterial growth, ensuring a hygienic environment for patients and staff.

We are so confident in the quality of our IV poles that we can offer an industry-leading 10-year frame warranty, a testament to our commitment to excellence and customer satisfaction.

In conclusion, our new and improved IV pole is a game-changer in healthcare equipment. With its innovative design, superior materials and unmatched durability, we have raised the bar for IV poles in the industry.

RMA IV poles are designed with efficiency in mind. The unique nesting registered design allows IV poles to be stored together, saving valuable storage space and decluttering wards and storage areas.

Space Saving Design

Dimensions

Base at Widest Point	52cm
IV Pole Height Adjustment <i>(Floor to Top)</i>	158 - 200cm
Top of Base to Floor	12cm
Overall Weight	7.5kg
Tube Diameter	25.4mm
Total Weight Capacity	8kg
Weight Capacity <i>(Per Hook)</i>	2kgs
Twin Wheel Castors	75mm ^Ø

Another significant improvement in the RMA IV pole design is the use of solid machined bushes for castors fixing eliminating the need for threaded inserts that can become loose and unserviceable over time. The new RMA IV Pole is also fitted with two anti-static rust resistant 75mm castors.
